FIRST AID TREATMENT:

- ALWAYS OBTAIN IMMEDIATE MEDICAL TREATMENT AND SHOW THIS LABEL TO PHYSICIAN.
- Refer to Responses under PRECAUTIONS..

NOTE TO PHYSICIAN:

Administer atropine sulphate, intravenously (1 - 4 mg) every 5 - 10 minutes until the first signs of atropinisation (dry flushed skin and tachycardia) occurs. 2-PAM at 50mg/kg up to a total dose of 1 - 2 g or $\frac{2}{3}$ of this dose Protopam. Repeat oximes if necessary. Do not give morphine.

MODE OF ACTION:

Bitrad Terbufos belongs to the organophosphate insecticide group which is classified under IRAC (Insecticide Resistance Action Committee) group code 1B with insecticidal action as acetylcholine esterase inhibitors.

RESISTANCE WARNING:

Any nematode/insect population may contain individuals naturally resistant to Terbufos and other group code 1B insecticides. The resistant individuals can eventually dominate the insect On nematode population if group 1B products are used repeatedly. These resistant nematodes/insects may not be controlled by Terbufos 15 GR or any other group code 1B insecticide.

- Avoid exclusive repeated use of products from the same insecticide group code. Alternate with products from different insecticide group codes.
- Integrate the control methods (chemical, growing practices, biological) into insect control programmes.

For specific information on resistance management contact the Distributor of this product.
